SHOPIFY · SINCE 28 SEPTEMBER

AI agents can now finish a Shopify checkout.

In the shopper's browser, and only after the buyer confirms. Here's what that changes, and what it doesn't.

Swipe →

WHAT SHOPIFY ADDED

Four tools for browser agents.

`get`

Read the checkout
Items, totals, status, messages.

`update`

Update fields
For example the shipping address.

`complete`

Submit the order
Only after the buyer confirms.

`back`

Return to the store
Back to the storefront.

✔ No setup needed from the merchant. 3D Secure still goes back to the buyer.

WHAT IT DOESN'T CHANGE

The decision still happens on the product page.

Checkout is getting easier, for people and for agents. Whoever shops needs the same answers first: what's in it, how much, how long it lasts.

MY CHECK THIS WEEK

Written plainly, near the buy button.

Product name

€24.90

1. Dose: 2 capsules a day
2. 60 capsules · lasts 30 days
3. €0.83 per day
4. Shipping and delivery time
5. Guarantee and returns

Add to cart

Example, made-up product. On some pages I've reviewed, part of this was only on the box photo or in a closed tab.

FREE CHECKLIST + PROMPT

Run the full check on your own page.

10 checks and a copy-paste prompt for ChatGPT, Claude or Gemini.

Link in the post.
