HOW I WORK WITH AI

DON'T THROW OUT YOUR PROTOTYPE

it's the best brief

02

01 / THE PROTOTYPE

NOT WASTED WORK

You've got a prototype you put together with AI, and you keep hearing you should start over? Relax. A working prototype is the best brief I can think of.

- ✓ **It shows what you want**
- ✗ **Not wasted work**

03

02 / WHAT IT SHOWS

THREE THINGS

You can see which screens you need, what the user does, and what the logic is.

1. **Which screens you need**
2. **What the user does**
3. **What the logic is**

04

03 / HOW I DECIDE

I SPLIT IT IN TWO

The interface and the logic can quite often be saved, and that saves time. The backend is a different story: it often needs a redesign.

- **Interface and logic: often stay**
- **Database**
- **Permissions, security**

a different story

05

04 / THE DECISION

WHAT DO I KEEP?

So I don't throw it out. I look at what I can carry over.

- ~~Throw it out~~
- **See what carries over**

RÉKA VÍG / THE WOW STUDIO

KEEP GOING OR REBUILD?

If you have a prototype and can't decide whether to keep going or rebuild, send me a message and I'll take a look.
