A SMALL SHOPIFY TOOL

Every morning, the stock checks itself.

A tool I built for two Shopify stores. Here's how it works, and what I changed along the way.

HOW IT WORKS

Three steps, no one watching.

1

Every morning

It checks every active, stock-tracked product in both stores.

2

Below its limit?

The product goes into the email, as critical or warning.

3

One email

To the warehouse and production. Each product at most once a day.

WHAT THEY GET

Critical first, then warnings.

Stock monitor · noreply

⚠️ Low stock: 1 critical, 2 warnings

⚠️ Low stock alert · STORE 1

🔴 CRITICAL (1)

Product	Warning / critical	Stock
Product A, 50 ml	250 / 200	**0 pcs**

🟠 WARNING (2)

Product	Warning / critical	Stock
Product B, 6 ml	20 / 10 *	**14 pcs**
Product C	40 / 15	**31 pcs**

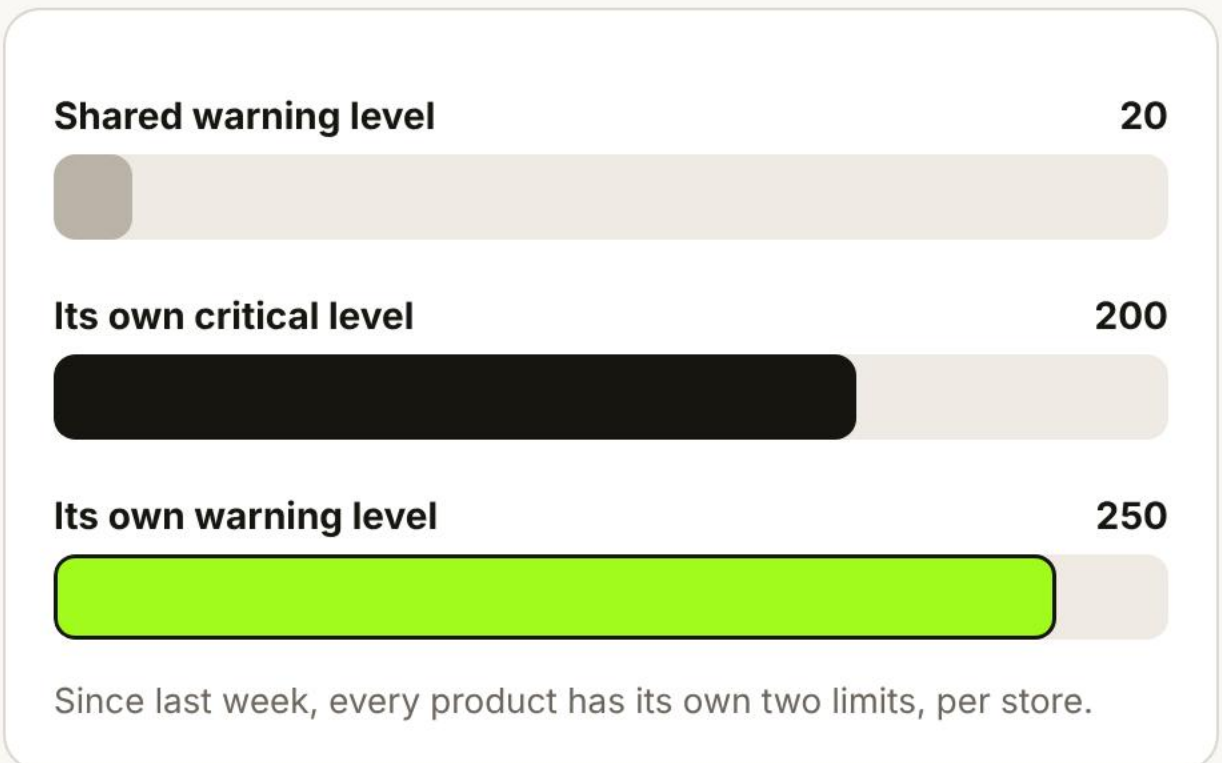

Manage stock in Shopify

Example with made-up products. The real email is in Hungarian.

ONE LIMIT DIDN'T FIT

Production needs to know when about 200 are left.

For one fast seller, roughly that many sell in two weeks. A warning at 20 pieces is far too late.

Since last week, every product has its own two limits, per store.

THE SECOND STORE

No alert running, no heads-up.

A popular product ran low on the second store and nobody got a warning, because the alert wasn't running there yet.

- **Store 1**
  Alert running since late June
- **Store 2**
  Alert running since last week

SINCE LATE JUNE

117

alert emails in the log

938

product alerts in those emails

Source: the tool's own alert log, as of 15 October 2026.

THE USEFUL PART

Ask the people who plan production what number they need.

If someone on your team checks the same thing in Shopify by hand every day, that's a good candidate for a small tool like this.
