REVIEWING AI CODE

WHERE DID YOU LOOK AT YOUR CODE FROM?

a circle from above, a triangle from the side

Swipe →

02

01 / ONE OBJECT

THREE VIEWS

The same object is a circle from above, a square from the front and a triangle from the side. Look from one place and you're right, you just don't see all of it.

- **From above: circle**
- **From the front: square**
- **From the side: triangle**

all three are true

03

02 / THE TRAP

SAME SPOT

Ask AI to review what it just wrote, in the same chat, and it looks from the same place it wrote it from.

1. **"Write a login page."**
2. **"Review it, is it okay?"**
3. **"Reviewed it, looks good."**

example

03 / ANTHROPIC'S GUIDE

A FRESH LOOK

04

The Claude Code guide says a fresh context reviews better, because it isn't biased toward code it just wrote.

Source: Claude Code, Best practices (code.claude.com)

- **New chat**
- **Only the code**
- **One point of view, e.g. an attacker**

review it like this

05

04 / ONE CATCH

IT ALWAYS FINDS SOME

A reviewer looking for problems will always find some. Ask it to flag only what actually breaks the app or its security.

- **Breaks the app**
- **Security**
- **Taste, nitpicks**

real problems only
