FREE CHECKLIST + PROMPT

Paste your product page link.

Run my first 10 checks.

Works with ChatGPT, Claude or Gemini. Built for Shopify supplement product pages.

HOW IT WORKS

Three steps, one page.

1

Tick the checklist yourself

On your phone, as a first-time buyer, on the page your ads send people to.

2

Run the prompt

Paste your product page link, add two screenshots: the first screen and the buy box.

3

Compare

Where you and the AI both left a box empty, start there.

THE CHECKS · 1–3

Before anyone scrolls.

1

First screen

Who it's for, when to use it, price and dose, without scrolling.

2

The main idea

What makes you different, not hidden in a closed tab.

3

Buy box

Shipping, guarantee and payment next to the button.

THE CHECKS · 4–7

The offer and the proof.

4

Price per day

How long a pack lasts, cost per day or serving.

5

Subscription maths

Cheaper at every quantity? Perks visible?

6

Reviews

Before the bottom of the page.

7

Claims

Stated plainly, and you can back them up.

THE CHECKS · 8–10

The small things that stop a sale.

8

Text, not just images

Ingredients, dose and pack size written as text.

9

Mobile buying

Add to cart within reach. No reloads or jumps.

10

Ad match

The first screen continues the ad's story.

WHY "COULDN'T CHECK" MATTERS

AI tools miss things.

On one store, an automated review told me the page had no reviews. It did. The review widget loaded with JavaScript, and the tool never saw it.

HOW IT WAS

~~Reviews: none found~~

WHAT THE PROMPT DOES

Reviews: couldn't check, send a screenshot

THE LAST PART

3 questions your page doesn't answer.

The prompt ends with the first three questions a first-time buyer would have, and can't find an answer to. Their answers belong on the first screen or in the FAQ.

FREE PDF

Checklist + prompt, ready to copy.

It's a first look, not an audit. It only sees what's on the page. Traffic sources, conversion by device and the offer itself need the numbers.
