SUPABASE STORAGE

Invoices in a bucket? Is it public?

Who can download the files your app stores.

Swipe →

THE RULE

Public = anyone with the link.

Supabase: in a public bucket, **anyone who has the file URL** can access the file.

Supabase Docs: Storage Buckets

WHAT IT SKIPS

No access check on download.

Public buckets bypass access control for **retrieving and serving files**, so RLS doesn't run on downloads.

Supabase Docs: Storage Buckets

THE TRAP

It looks protected.

Uploads, deletes, moves and copies are **still checked** by RLS. Only downloads are open.

Supabase Docs: Storage Buckets

CHECK YOUR APP

Which bucket is public?

Look at what's inside each public bucket, then open a file link **while logged out**. Sensitive files go in a **private** bucket (the default), served with signed URLs that expire.
