SHOPIFY · PAGESPEED

Your speed score might be lying.

What I found hidden in a Shopify theme during an audit.

Swipe →

WHAT I FOUND

An unreadable script.

Auditing a Scandinavian skincare brand's Shopify store, I found a script in the theme code that had been made **deliberately unreadable**.

WHAT IT DID

Scripts gone for Linux visitors.

For visitors on Linux, it stripped the scripts out of the page. Linux is typically where **Google's testing tools** run, so the PageSpeed score looked better than what real shoppers got.

WHAT I KNOW

Not who.
Just what.

Who added it and why, I don't know. What it did, I do.

CHECK YOUR STORE

Lab score vs. real users.

PageSpeed Insights shows two things. The **lab score** comes from a single simulated test. The **real-user data** (with enough traffic) comes from actual Chrome visitors. Some gap is normal. A big one is worth a closer look.

Google, web.dev: Why lab and field data can be different

ONE MORE RULE

If nobody can explain it, it's a risk.

A "speed boost" on your store that nobody can read or explain is a risk in itself.
