AI CHAT · COSTS

WHO PAYS FOR YOUR AI CHAT'S *calls?*

What happens when an endpoint has no limit.

Swipe →

THE RISK

NO LIMIT = YOUR BILL.

If your chat endpoint has no limit, anyone can call it **again and again**, and every call goes on your bill with the AI provider.

WHAT OWASP SAYS

UNRESTRICTED CONSUMPTION.

Unrestricted resource consumption can lead to **denial of service or higher operating costs**. Paid services are often charged per request.

OWASP API Security Top 10 2023 · API4

THE ADVICE

RATE LIMIT + SPENDING LIMIT.

Limit how often a client can call the API, and **set spending limits for every provider**. If you can't, at least set billing alerts.

CHECK YOUR APP

TWO QUESTIONS.

Is there a **rate limit** on your chat endpoint (per user)? Is there a **spending limit** set with your AI provider?
