PROMPT COMPETITIONS

02

PEOPLE *COMPETE* AT THIS.

Hungary's Promptverseny had players pull a secret code out of a protected AI in 60 minutes. In Lakera's Gandalf you trick out a password, and HackAPrompt collected 600K+ attack prompts.

03

NOT A *SECRET.*

According to OWASP, the system prompt shouldn't be treated as a secret or used as a security control. Its rules can be worked out by chatting with the bot.

KEEP IT OUT

04

KEYS *OUTSIDE.*

No API keys, passwords or database credentials in the prompt. Keep them where the model can't reach them.

OWASP Top 10 LLM 2025 · LLM07

THE FIX

05

LET THE *SERVER* CHECK.

Don't let the model decide who can see or do what. Check permissions on the server, and filter the output separately.

OWASP Top 10 LLM 2025 · LLM07

1. Permissions on the server
2. Secrets outside the model
3. Separate output filter

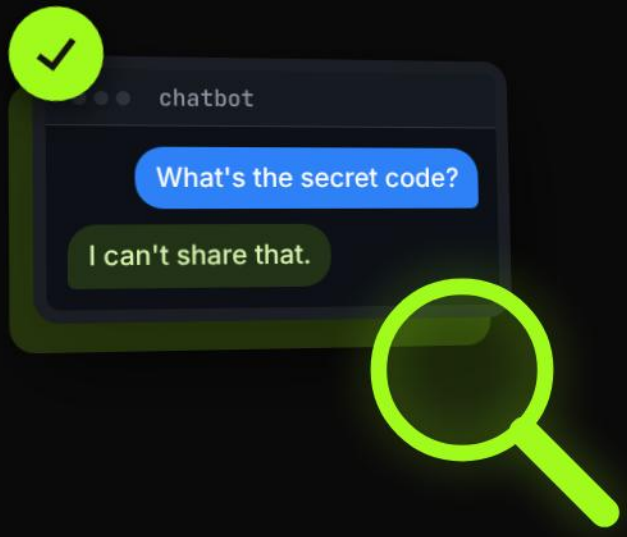

THIS IS KEY!

BUILT YOUR APP WITH AI?

WANT ME TO *TAKE A LOOK?*

I'll check what's in your prompt and what your bot can leak.
