THE SETUP

02

A CUSTOM PLAN PICKER.

A Shopify theme for a US supplement brand. The product page had its own custom subscription picker.

Our own client project, anonymised

1	custom subscription picker
1	subscription app
0	error messages

SILENT!

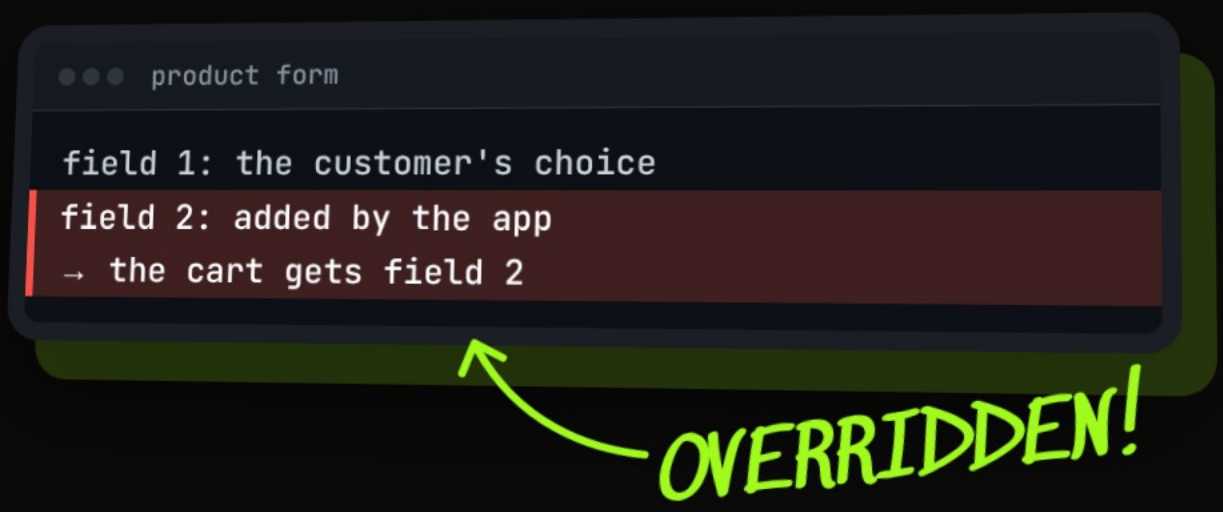

THE BUG

03

TWO FIELDS, ONE FORM.

The subscription app quietly added a second field next to it, in the same form, and that field overrode what the customer chose.

Our own client project, anonymised

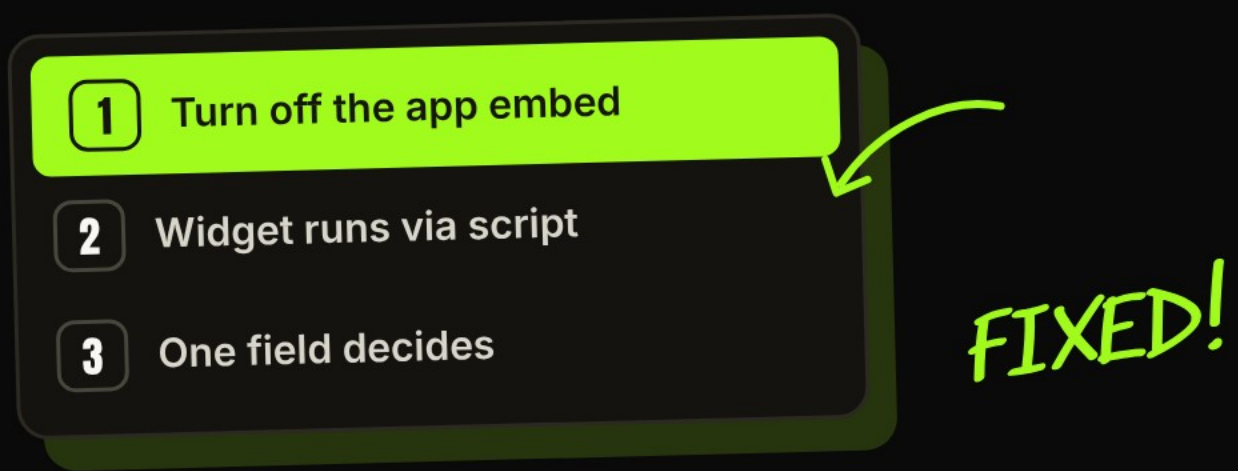

THE FIX

04

APP EMBED *OFF.*

I turned off the app embed, and the widget now runs the old way, through a script. So only one field decides what goes into the cart.

Our own client project, anonymised

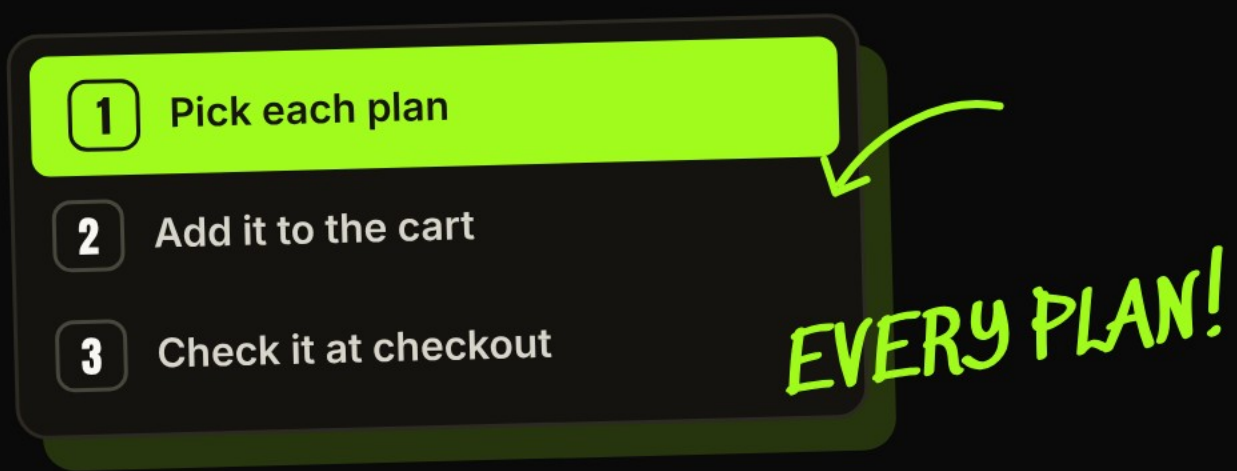

THE HABIT

05

TEST TO *CHECKOUT.*

When two widgets write to the same form, the bug is silent. So now I test subscriptions all the way to checkout, with every plan.

Our own client project, anonymised

THE LESSON

SILENT BUGS *NEED TESTS.*

If you sell subscriptions on Shopify and want me to take a look, send me a message.
