CLIENT PROJECT · SHOPIFY

DANCING *PRICES.*

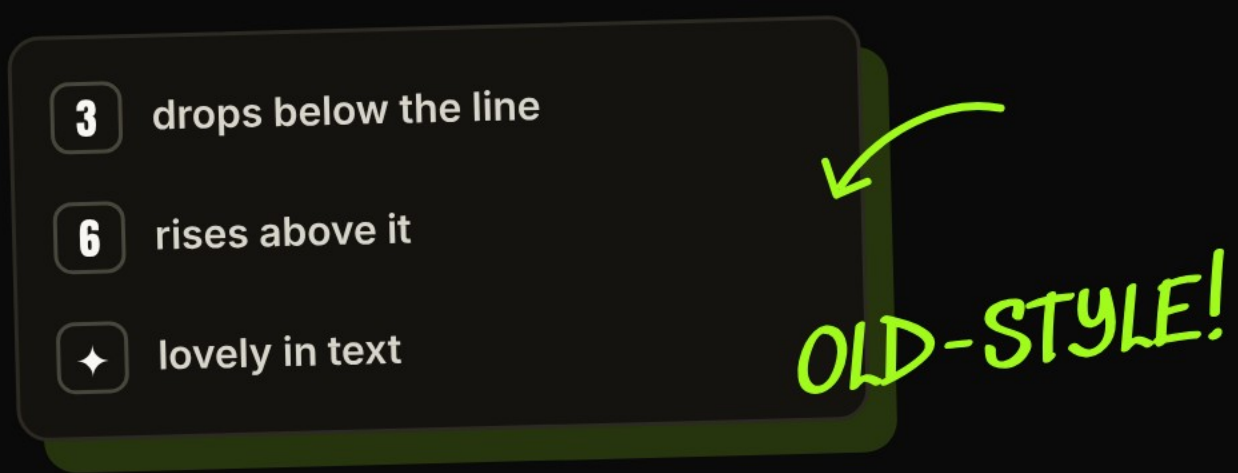

THE SETUP

02

AN ELEGANT *SERIF.*

On a premium supplement brand's site, we used an elegant serif font. Its numbers are old-style: some drop below the line, some rise above it.

THE PROBLEM

03

IN PRICES, THEY JUMP.

In text, that looks lovely. In prices, it looks like the numbers are jumping around.

Our own client project, anonymised

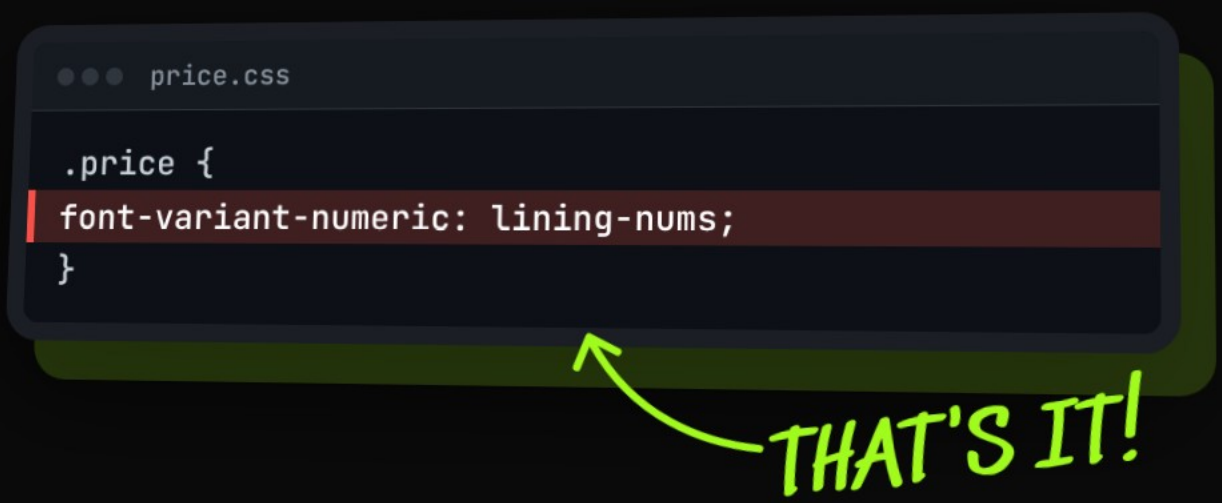

THE FIX

04

ONE LINE *OF CSS.*

font-variant-numeric: lining-nums puts the numbers on one line, as long as the font has that option. This one did.

Our own client project, anonymised

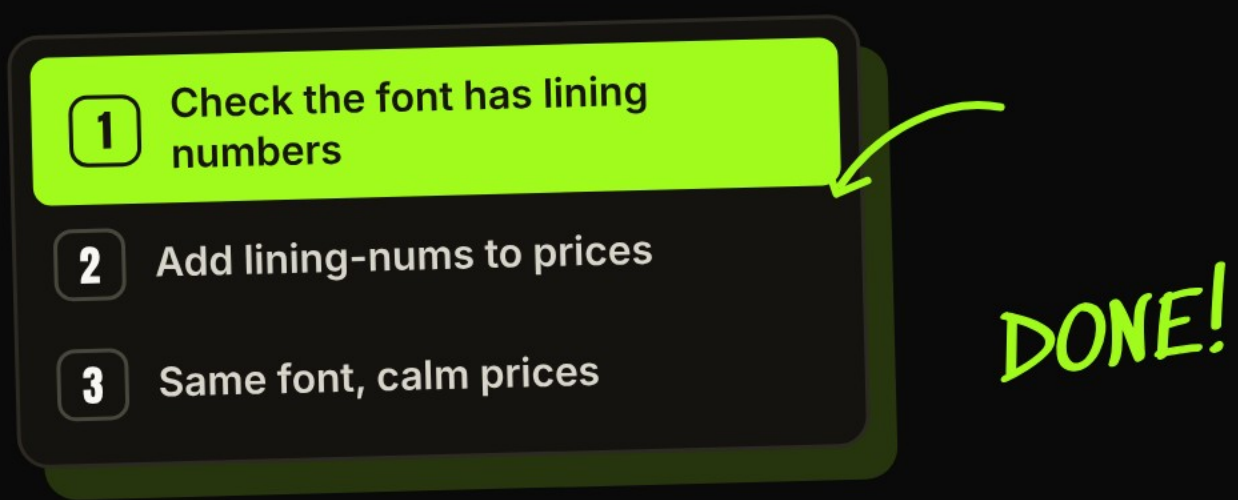

THE RESULT

05

SAME FONT, *CALM PRICES.*

No new font and no redesign. Just one setting the font already had.

THE LESSON

SOMETHING *LOOKS OFF?*

Sometimes it's just one setting. If you'd like me to look over your product page, send me a message.
