THE ASK

02

THREE TOOLS *TO SET UP.*

We were asked to add tracking codes to a client's site. Their marketing partner wanted Google Analytics, Tag Manager and Search Console set up.

Our own client project, anonymised

1. Google Analytics
2. Tag Manager
3. Search Console

THE REQUEST

WHAT WE FOUND

03

TWO MINUTES ON THE LIVE SITE.

Before pasting anything in, we checked the live site. Three things showed up.

Our own client project, anonymised

- Analytics already running: visits counted twice
- Tag Manager container empty
- New code would bypass the cookie gate

CONFLICTS!

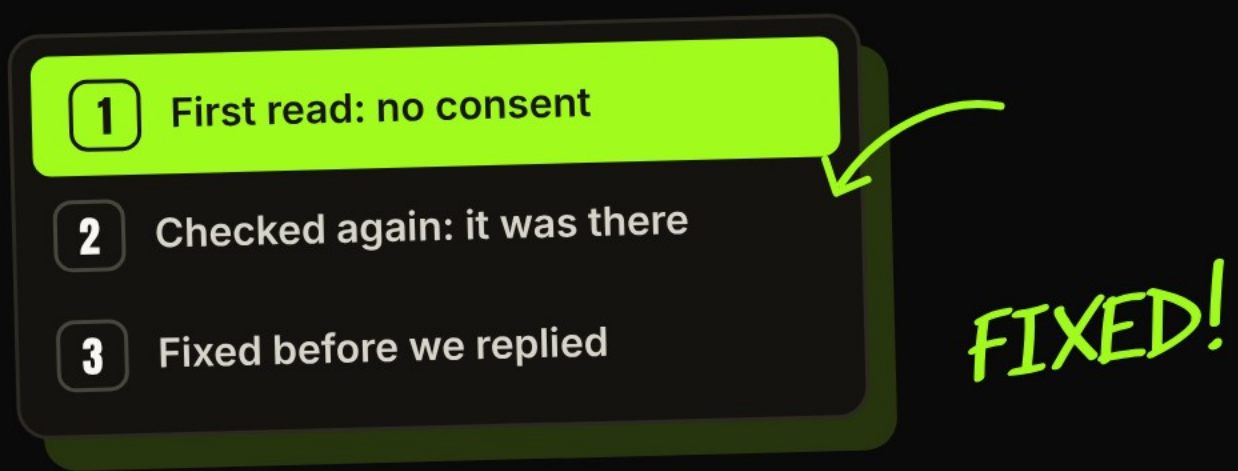

OUR MISTAKE

04

WE GOT ONE *WRONG TOO.*

At first we thought there was no cookie consent at all. After checking, there was, and Tag Manager would just have bypassed it. We fixed that before we replied.

Our own client project, anonymised

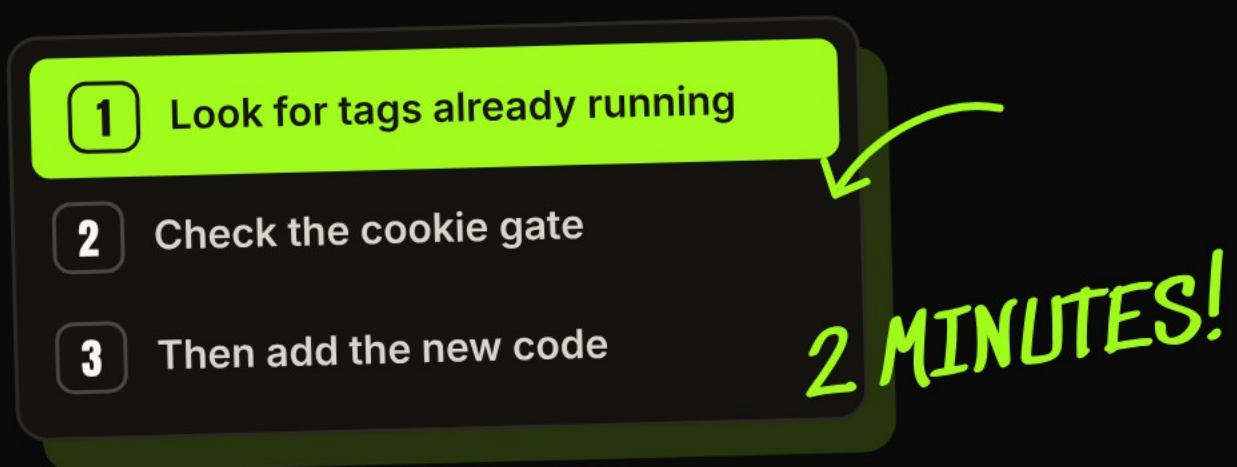

THE RULE

05

LIVE SITE *FIRST.*

Before adding any tracking code, check the live site. Two minutes, and every conflict shows up.

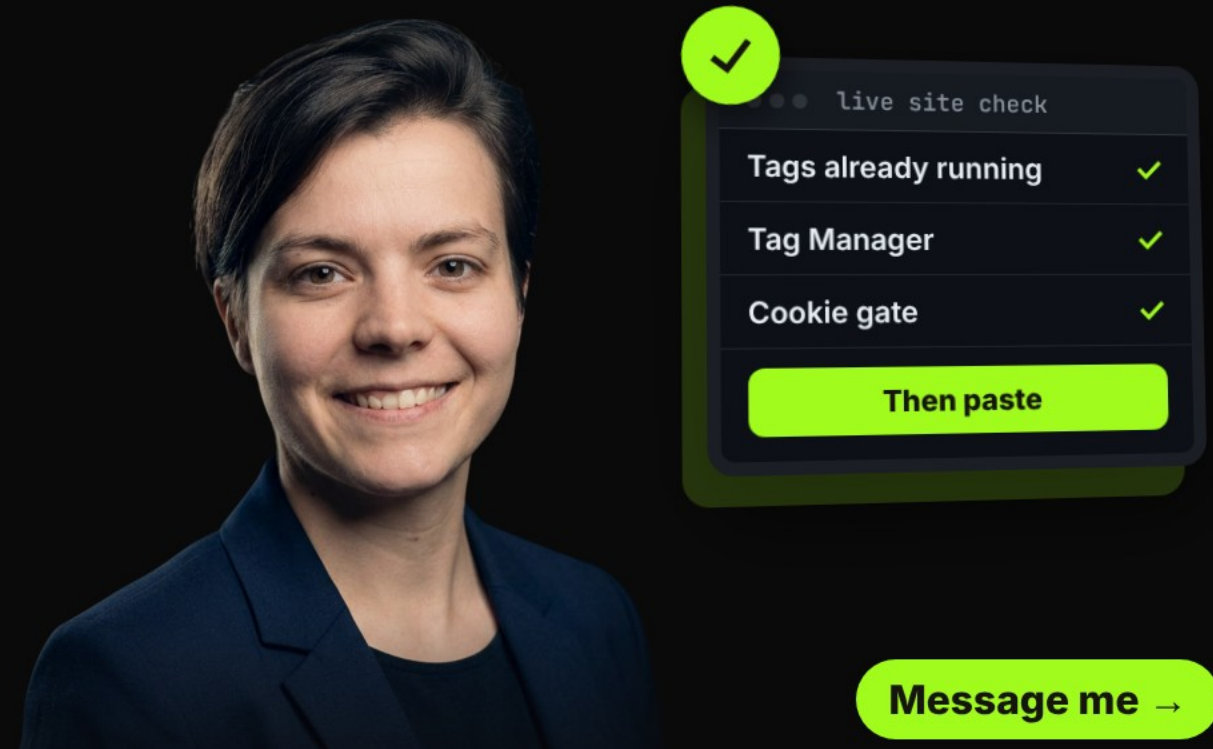

Our own client project, anonymised

THE LESSON

WHAT'S RUNNING ON YOUR SITE?

If you're not sure, send me a message and I'll take a look.
