SHOPIFY SECURITY · OCTOBER 2026

Hijacked apps sent shoppers to fake checkouts.

Here’s a 5-minute check for your store.

Third-party apps were hijacked.

Since 10 October. The developers of **Hulk Product Options** and **Selleasy** confirmed it for their apps.

HulkApps statement via iTnews; Logbase (Selleasy) incident notice

A fake checkout, then the real one.

Click Checkout, a page that looks like Shopify’s on a different domain, then back to the real checkout. That’s what makes it easy to miss, for the shopper and for you.

Roman Zipp’s research, Oct 2026

CHECK 1

Test your checkout.

Private window, add a product, click Checkout. The address bar should show your store’s checkout, not an unknown domain. The fake page showed once per visitor, so use a new private window for each test.

CHECK 2

Go through your apps.

Using one of the affected apps? Read the developer’s statement and ask them directly. A clean test today doesn’t prove nothing happened last week.

CHECK 3

Close the doors.

Turn on two-step login for yourself and your staff. Remove apps you don’t use anymore. Fewer apps, fewer doors.

Shopify, 20 Oct 2026: your store now asks shoppers to confirm before sending them to an outside website.

RUNNING A SHOPIFY STORE?

Send me a message.

I’ll take a look at your checkout. And follow for more updates like this.
