FUN PROJECT

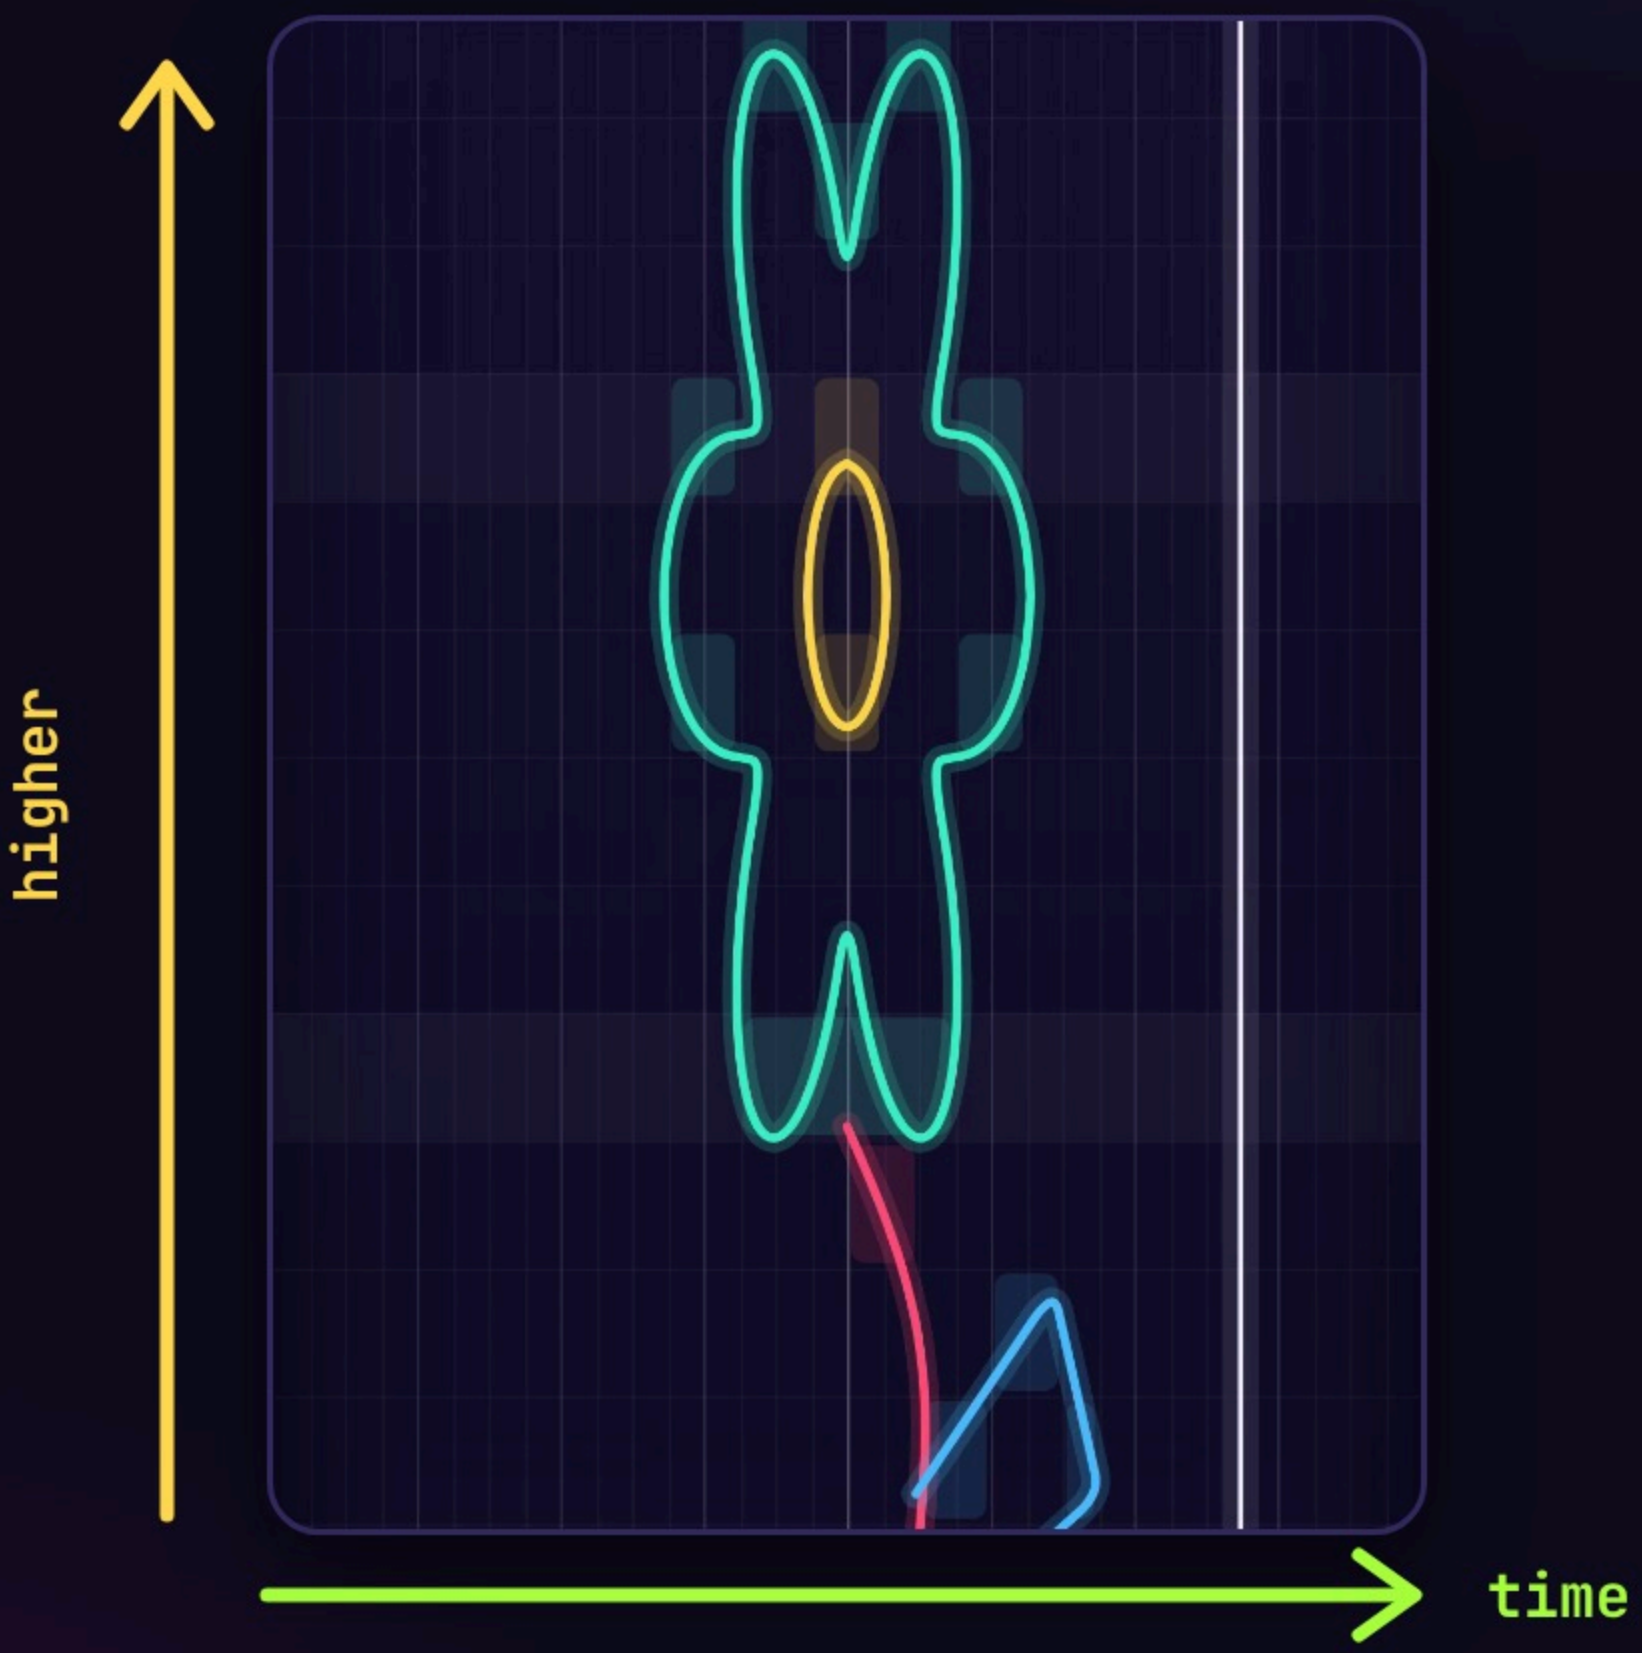

Draw something, hear it play.

This is **Loop Doodle**, a browser toy I made just for fun.

Swipe →

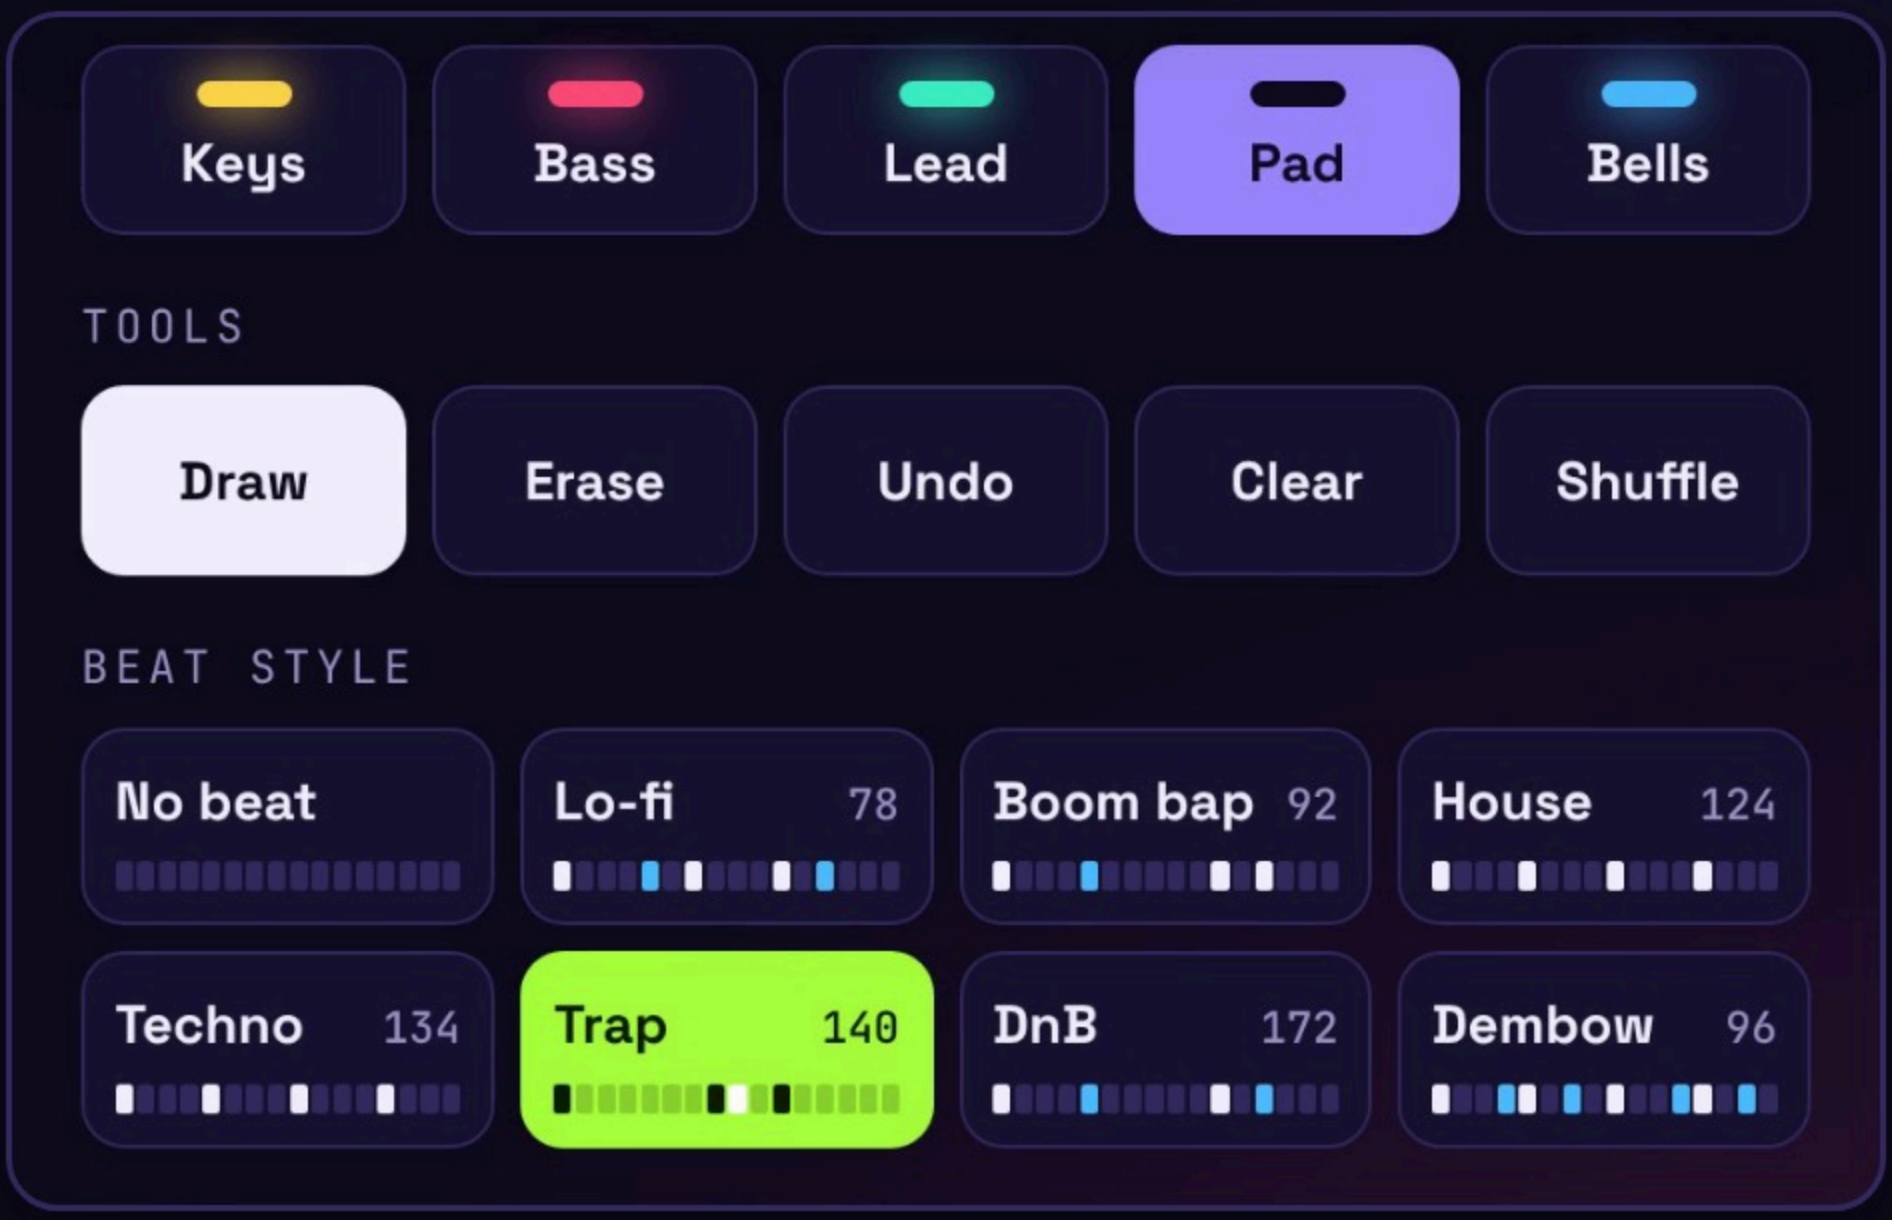

Time left to right, pitch bottom to top.

Every line snaps to a scale, so there are **no wrong notes.**

02 / SOUNDS AND BEATS

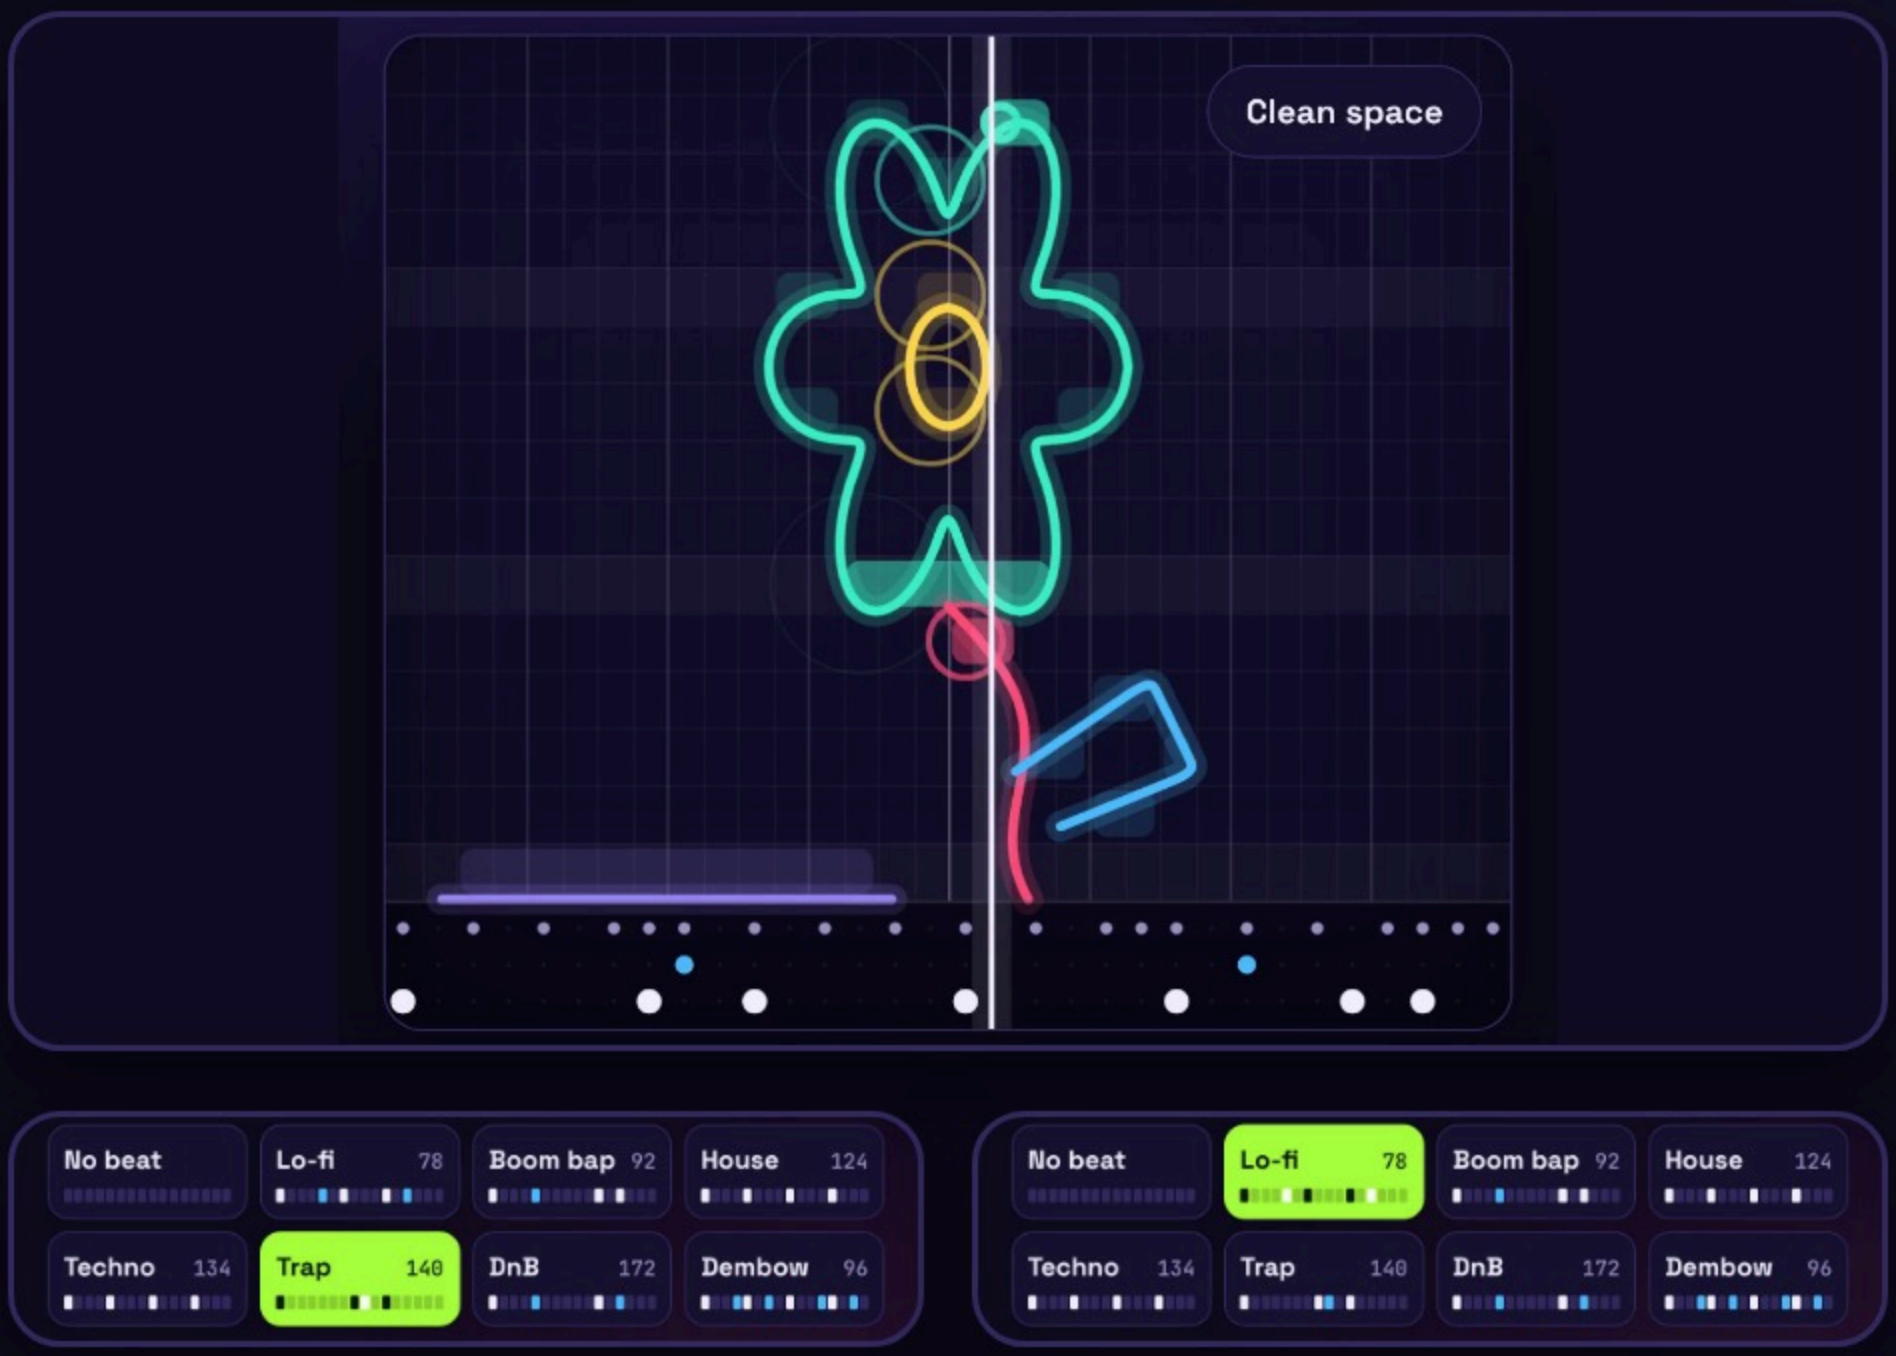

5 instruments, 7 beats.

Each part of a drawing can be a different instrument: on the house, the walls are keys, the roof is lead, the door is bass. Beats go from Lo-fi to Dembow.

03 / SAME DOODLE

Different beat, different mood.

Trap runs at 140 BPM, lo-fi at 78. Same flower, a completely different track.

04 / WHY I MADE IT

Not every project has to make money.

AI gives you superpowers, but it also comes with pressure: the feeling that you have to keep up with its pace.

Fun projects like this are how I remind myself to **slow down sometimes**. Work and AI are tools, not the point.

It's hard to think of anything more "useless".
That's the point.

TRY IT

Draw something, have a listen.

LoopDoodle

Draw a squiggle. Get a banger.
