SECURITY, EXPLAINED SIMPLY

TURN IT ON TONIGHT

two-factor, on 4 accounts

Swipe →

02

01 / GOOGLE

THE KEY TO HALF THE INTERNET

It's how you log into Firebase and plenty of other services. If it falls, a lot falls with it.

1. **myaccount.google.com**
2. **Security & sign-in**
3. **2-Step Verification → Turn on**

per Google Help

03

02 / GITHUB

IT'LL BE MANDATORY ANYWAY

If you push code, GitHub will make it mandatory sooner or later. You get 45 days to set it up, then a 7-day grace period, then you're locked out.

- **45 days to set up**
- **+7-day grace period**
- **Then no access**

GitHub docs

04

03 / HOSTING

VERCEL REQUIRES IT TOO

By January 20, 2027, Vercel requires every user to set up an authenticator app.

- **Authenticator app set up**
- **Recovery codes saved**

deadline: Jan 20, 2027

05

04 / DATABASE

YOU SEE THE CODES ONCE

Supabase gives you 10 recovery codes, but shows them only once. If you lose all your factors, they can't give your account back.

- **10 recovery codes**
- **Shown only once**
- **Save them now**

RÉKA VÍG / THE WOW STUDIO

WANT ME TO LOOK?

Setting it up on four accounts takes about ten minutes.
If you built your app with AI and want me to check its security, send me a message.
